Tips for better caregiving in **SCHIZOPHRENIA**

Educate yourself about schizophrenia

Knowledge helps in better understanding and better care of patients.

Reduce stress

Stress can flare up agitation / aggression / suicidal thoughts

Empower patients

Encourage the patients to do things independently. Support & empower them

Monitor medication

Carefully monitor the medications to avoid relapse & ensure better recovery.

Don't hide substance abuse

Substance abuse can worsen/derail treatment outcome. Inform your doctor if patient has a substance abuse problem.

Watch for signs of relapse

If you notice any worsening of symptoms / relapse reach your doctor immediately for quick control.
